

CIRRUS

SINGLE CRYSTAL X-RAY DIFFRACTION CIRRUS

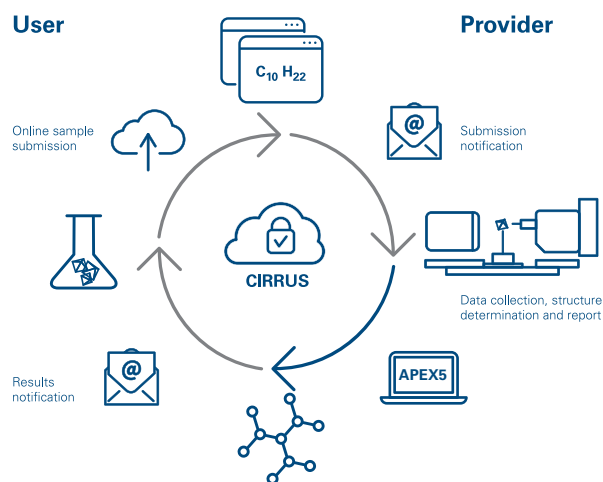

Cloud data exchange for Crystallography Service Providers

As a scientist providing crystallography as a service, you know how time-consuming administrative work can be. Following up with users about missing information or clarifying what they want you to do causes delays, wastes time and leads to frustration. The challenge to keep paperwork up-to-date, and the constant quest to find accessible servers to exchange data never end. In the worst case valuable information is lost. Of course, this all becomes even more problematic when you are asked to work on a structure which was determined some time ago.

Life is about to get easier...

CIRRUS is a new cloud-based sample management workflow for crystallography service providers. It enables you to conveniently manage your users and their requested jobs in one place. This saves time and ensures your information is always accurate and up-to-date. CIRRUS provides your users with standardized templates for sample submission, that are seamlessly imported to APEX5 ensuring you have all the details needed to start the experiment in APEX5.

As you work on their sample, users receive notifications updating them on the progress of the request, whether they are in the lab next door or on the other side of the world. Finally, when you release the structure data to CIRRUS your user receives a message informing them that their results are available for retrieval. At any time, users can view their submissions, see the current status and access available results. CIRRUS is fully compliant with the strict European GDPR regulations for data privacy.

CIRRUS benefits you and your users

- User-friendly sample submission.
- Streamlined user and job management, efficient scheduling, and faster turnaround times.
- Paper-free digital sample management, saving time and improving information flow.
- Standardized forms ensure complete submissions for successful structural analysis.
- Seamless integration with APEX5 for convenient and error-free data transfer.
- Enhanced communication and data security, for improved user satisfaction

Improve your Crystallography service

By integrating CIRRUS into your crystallography service, you can achieve significant improvements. Streamlining user and job management will lead to efficient scheduling and faster turnaround times. Embracing paper-free sample management will save time and enhance information flow.

Prioritizing communication and security through CIRRUS will promote user confidence, ultimately leading to a more efficient, accurate, and reliable crystallography service. Improved user satisfaction will drive increased adoption, leading to sustainable growth for your crystallography service.

Make your users happier and more successful

Placing your users' needs at the core of your crystallography service with CIRRUS will significantly enhance their satisfaction. Through streamlined management, users will experience quicker responses to their requests, reducing waiting times and frustrations. The digital sample management feature will empower them with easy access to historical data, fostering efficiency in their projects and driving their scientific success. The user-friendly submission process means fewer errors and more productive outcomes. Moreover, CIRRUS' clear communication channels will ensure that their queries are promptly addressed, creating a sense of being valued and supported.

CIRRUS - Embrace digital sample management today

Streamline your crystallography service and boost user satisfaction with CIRRUS! Embrace digital sample management, seamless integration, and user-friendly features to enhance efficiency and deliver successful outcomes. Join CIRRUS today to revolutionize your crystallography workflow and provide top-notch service to your users.
